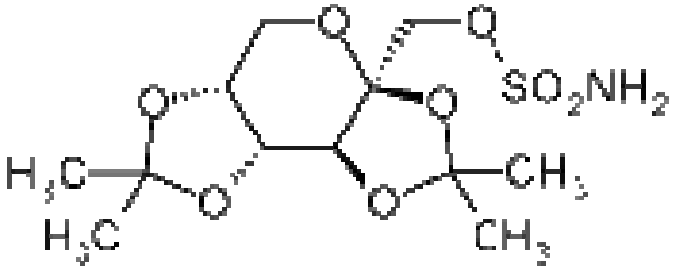
# Pharmacokinetic profiles of antiepileptic drugs by using dried blood spot and Liquid Chromatography-Tandem Mass Spectrometry

**Giancarlo la Marca**

**Mass Spectrometry Lab, Meyer Children's Hospital**

**Dept of Pharmacology, University of Florence**

# TOPIRAMATE (TPM) IS AN ANTIEPILEPTIC DRUG



**2,3:4,5-Bis-O-(1-methylethylidene)-beta-D-fructopyranose sulfamate**

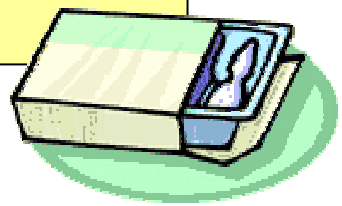
**CAS number 97240-79-4**

**ATC code N03AX11**

**Chemical data Formula $C_{12}H_{21}NO_8S$**

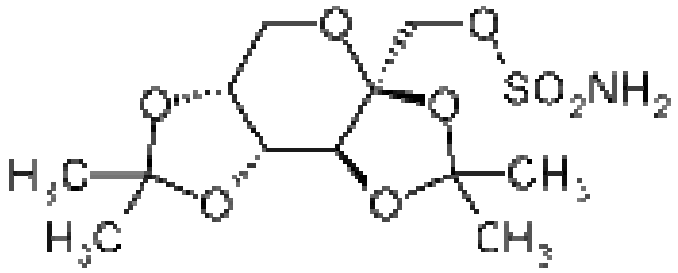
**Mol. mass 339.363 g/mol**

1) APPROVED AS MONOTHERAPHY OR ADJUNCTIVE TREATMENT OF PARTIAL AND GENERALISED SEIZURES IN ADULTS AND CHILDREN



2) TREATMENT OF LENNOX-GASTAUT SYNDROME

# TOPIRAMATE (TPM)



**Chemically, topiramate is a sulfamate-substituted monosaccharide, related to fructose.**

**Topiramate is quickly absorbed after oral use.**

**Most of the drug (70%) is excreted in the urine as unchanged drug. The remainder is extensively metabolized by hydroxylation, hydrolysis, and glucuronidation.**

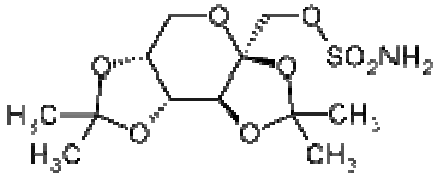
**Six metabolites have been identified in humans, none of which constitutes more than 5% of an administered dose.**

# THE ANTICONVULSANT ACTIVITY OF TPM:

**Inhibitory activity against glutamate receptors including *N*-methyl-d-aspartate (NMDA), kainate (KA) and α-amino-3-hydroxy-5-methylisoxazole propionic acid (AMPA) receptors.**

**Other studies indicate that TPM can influence the activity of voltage-activated $Na^+$ and $Ca^+$ channels, can reduce some carbonic anhydrase isozymes or the mitochondrial permeability transition pore.**

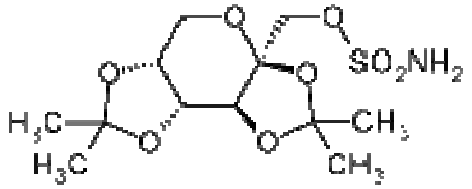
# TOPIRAMATE (TPM)



## Doses

- IN ORDER TO AVOID EARLY SIDE-EFFECTS (E.G. COGNITIVE DYSFUNCTION) THE INITIAL DOSE NORMALLY IS LOW AND INCREASED IN SLOW STEPS.
- THE USUAL INITIAL DOSE IS 25 TO 50 MG DAILY IN 2 SINGLE DOSES.
- RECOMMENDED INCREMENTS ARE 25 TO 50 MG EVERY 1 OR 2 WEEKS.
- COMMON DOSES FOR MAINTENANCE TREATMENT ARE 100 TO 200 MG DAILY.
- THE HIGHEST DOSE POSSIBLE IS 1,000 MG DAILY IN DIVIDED DOSES.

# TOPIRAMATE (TPM)

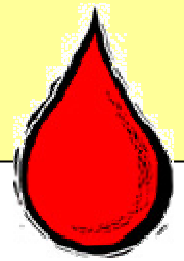


## SIDE EFFECTS

- CHANGE IN TASTE (CARBONATED BEVERAGES, ESPECIALLY DIET SODAS AND BEER, TASTE PARTICULARLY BAD)
- FEELINGS OF PINS AND NEEDLES IN THE HEAD AND EXTREMITIES
- COGNITIVE DEFICIENCY (PARTICULARLY WORD-FINDING DIFFICULTY)
- LETHARGY
- RENAL (KIDNEY) STONES
- IMPAIRMENT OF FINE MOTOR SKILLS
- VISION ABNORMALITY AND TRANSIENT OR PERMANENT VISION LOSS
- WEIGHT LOSS
- MENSTRUAL DISORDER

THE CLINICAL EFFECT OF THIS DRUG CORRELATES BETTER WITH BLOOD LEVEL THAN WITH DOSES.

THIS MAKES THERAPEUTIC MONITORING IMPORTANT.



# TOPIRAMATE (2-25 µg/mL) has been dosed mostly by

**HPLC UV detection: Sample volume required 1ml serum-2ml blood, LOQ 0.4µg/mL). liquid-liquid extraction and subjected to derivatization with 9-fluorenylmethyl chloroformate**

*Bahrami et al, 2005, J Chromatogr B*

**HPLC-MS :(0.5 ml serum; LOQ 1µgmL, LOD 0.3 µg/mL)**

*Masucci et al, 1998, J Mass Spectrom.*
*Christensen et al, 2002, Ther Drug Monit.*
*Britzi et al, 2003, Ther Drug Monit.*

**GC/NPD liquid-liquid extraction and nitrogen phosphorus detection**

*Riffitts et al, 1999, J Pharm Biomed Anal.*
*Tang et al, 2000, Ther Drug monit.*

**Capillary Electrophoresis with indirect UV detection**

*Klockow-Beck et al, 1998, J Chromatogr B*

**Immunometric method (0.2 ml serum, LOQ 1µg/mL, LOD 0.3 µg/mL)**

*DeGrella et al, 1988, Am Biotech Lab*

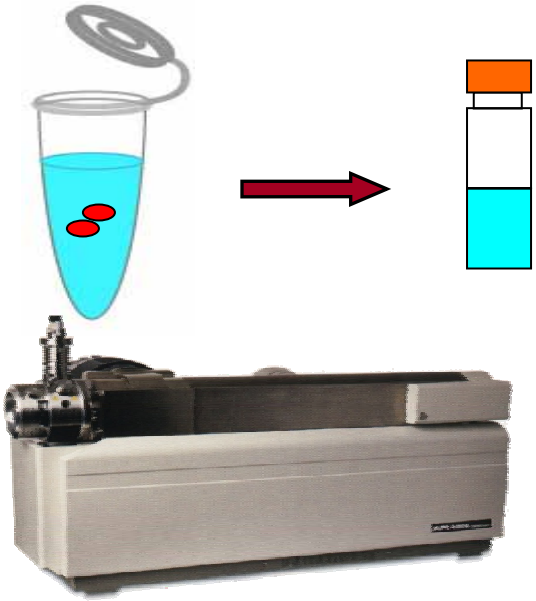
# SAMPLE PREPARATION FOR LC-ESI-MS/MS ANALYSIS

About 6 µL of entire blood,
about 3 µL of serum

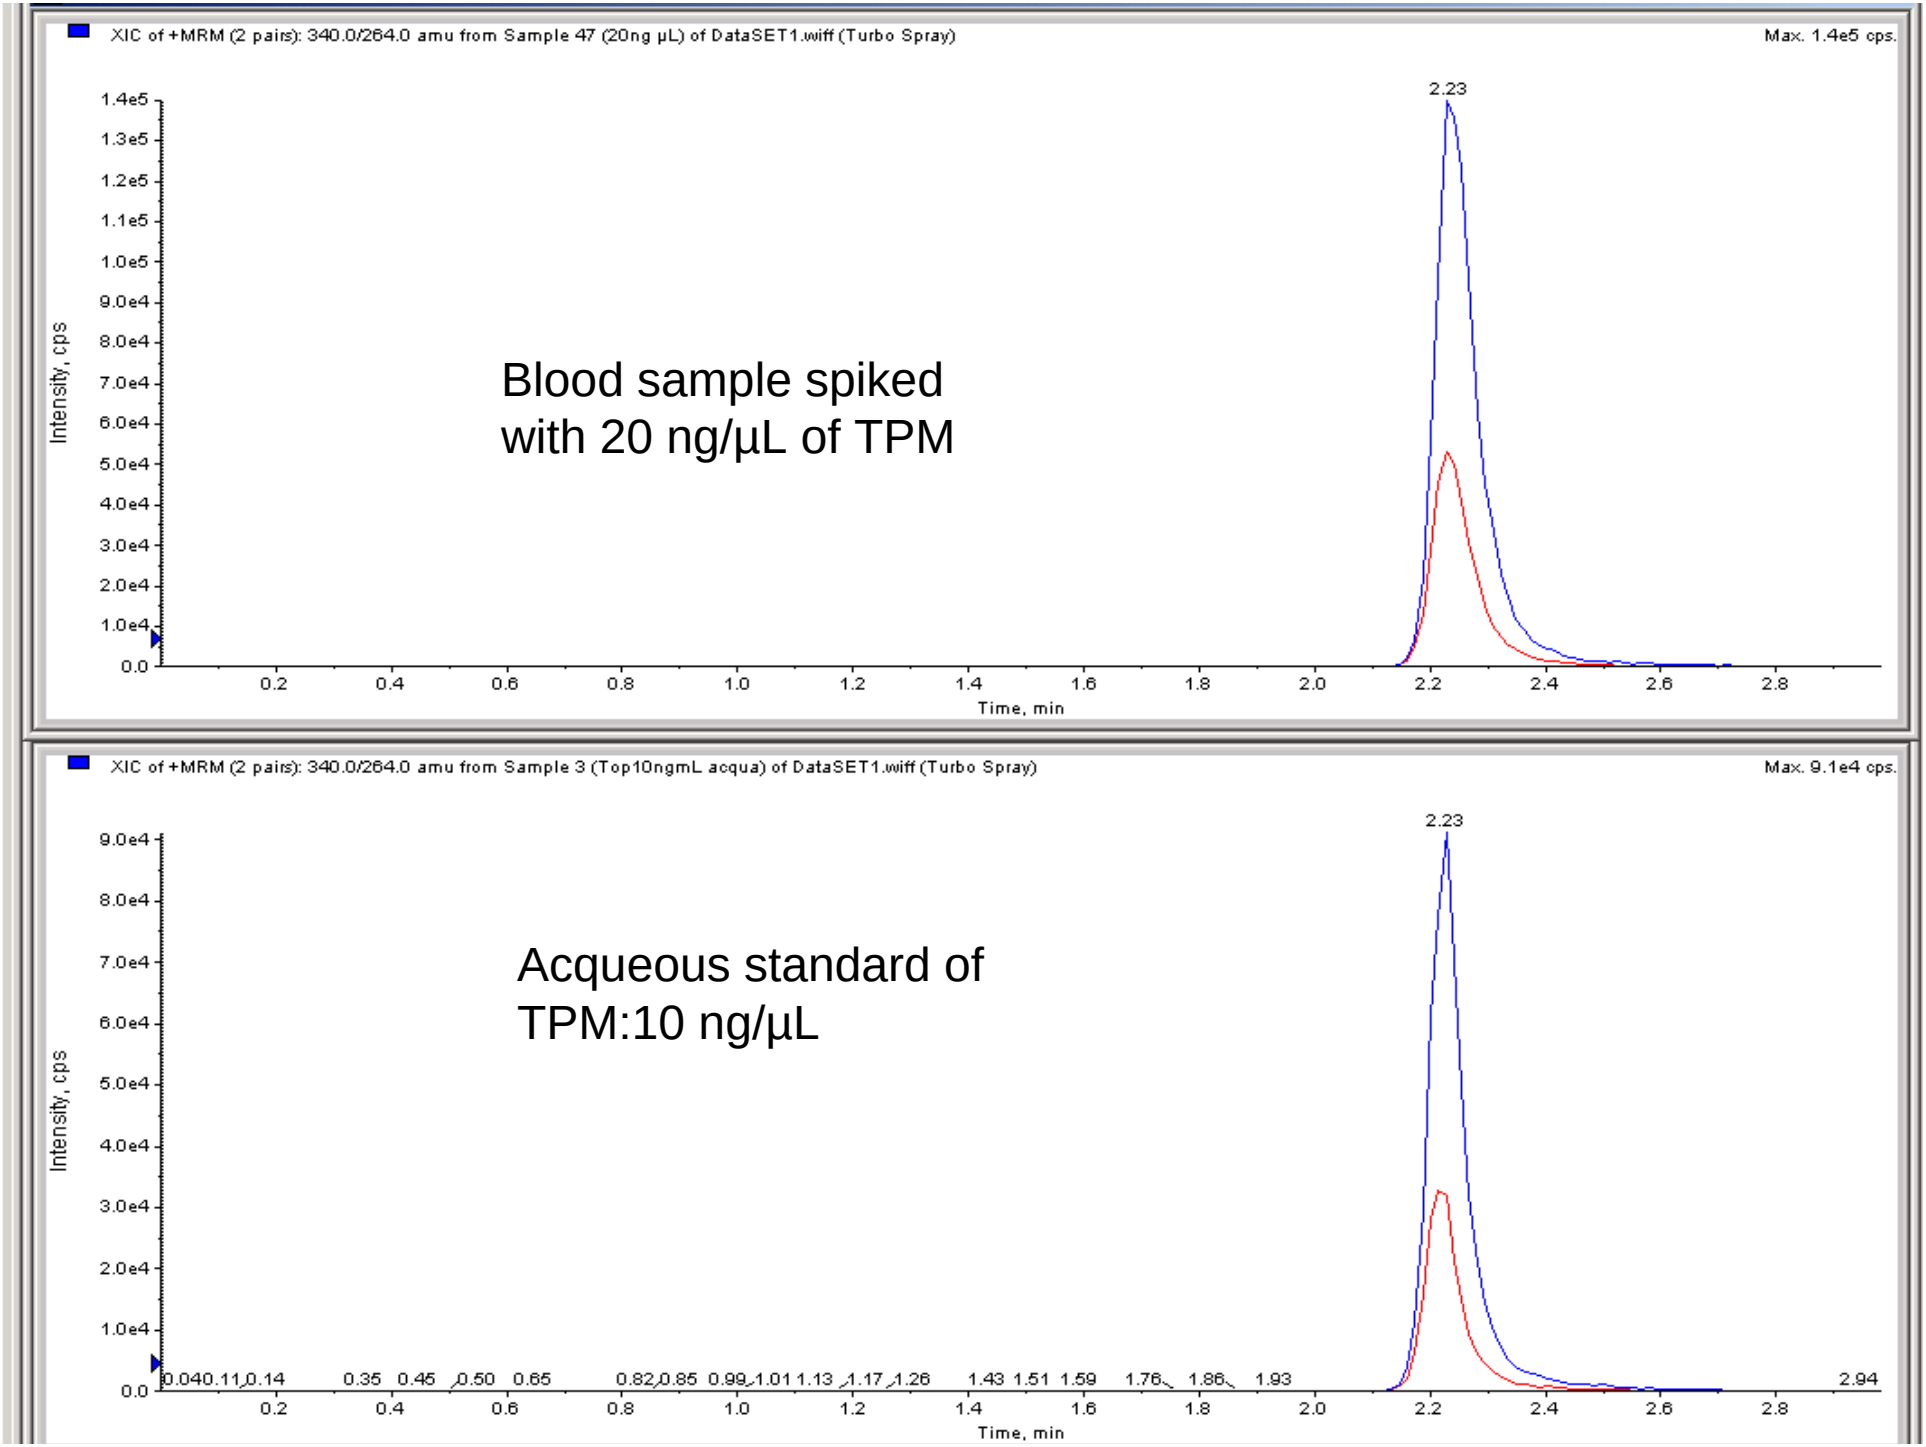
Blood Spot on paper

2 Spots are punched to obtain 2 circles with diameter of 3.2 mm. They are put into a vial eppendorf

200 µL of $H_2O$-$CH_3CN$ +0.05% formic acid 30:70 20 min Orbital Shaker



injection 5µL on Phenomenex Synergi 4u POLAR-RP 80A 4µm, 2 x 150 mm coupled to TIS-tripleQuad (PE Sciex) MS/MS system



XIC of +MRM (2 pairs): 340.0/264.0 amu from Sample 47 (20ng µL) of DataSET1.wiff (Turbo Spray)
Max. 1.4e5 cps.
Intensity, cps
Time, min
2.23
Blood sample spiked
with 20 ng/µL of TPM
XIC of +MRM (2 pairs): 340.0/264.0 amu from Sample 3 (Top10ngmL acqua) of DataSET1.wiff (Turbo Spray)
Max. 9.1e4 cps.
Intensity, cps
Time, min
2.23
Acqueous standard of
TPM:10 ng/µL

FULL-LENGTH ORIGINAL RESEARCH

# Topiramate concentrations in neonates treated with prolonged whole body hypothermia for hypoxic ischemic encephalopathy

*Luca Filippi, †‡Giancarlo la Marca, *Patrizio Fiorini, *Chiara Poggi, §Giacomo Cavallaro, †Sabrina Malvagia, ‡Domenico E. Pellegrini-Giampietro, and ¶Renzo Guerrini

*Neonatal Intensive Care Unit, Department of Critical Care Medicine, "A. Meyer" University Children's Hospital, Florence, Italy; †Metabolic Unit, Department of Pediatric Neurosciences, "A. Meyer" University Children's Hospital, Florence, Italy; ‡Department of Pharmacology, University of Florence, Florence, Italy; §Institute of Pediatrics and Neonatology, Fondazione IRCCS Ospedale Maggiore Policlinico, Mangiagalli e Regina Elena, University of Milan, Milan, Italy; and ¶Department of Neurology and Neurosurgery, "A. Meyer" University Children's Hospital, Florence, Italy

TPM concentrations were measured at the beginning of hypothermia, before the first dose of TPM ($T_0$), and at $T_{0.5}$, $T_1$, $T_{1.5}$, $T_2$, $T_4$, $T_6$, $T_8$, $T_{12}$, $T_{16}$, $T_{20}$, and $T_{24}$ (before the second dose), at $T_{26}$, $T_{30}$, $T_{34}$, $T_{40}$, and $T_{48}$ (before the third dose), and at $T_{48.5}$, $T_{49}$, $T_{49.5}$, $T_{50}$, $T_{52}$, $T_{54}$, $T_{56}$, $T_{60}$, $T_{64}$, $T_{68}$, and $T_{72}$. All of these four newborns were also on PB.

**Table 2. Mean ± SD topiramate pharmacokinetic profiles of newborns who reached the virtual steady state. Data are plotted that distinguish between newborns in DH or MH and between newborns receiving PB or not**

| | All newborns (n = 9) | Newborns with DH (n = 3) | Newborns with MH (n = 6) | p-value | Newborns with PB (n = 4) | Newborns without PB (n = 5) | p-value |

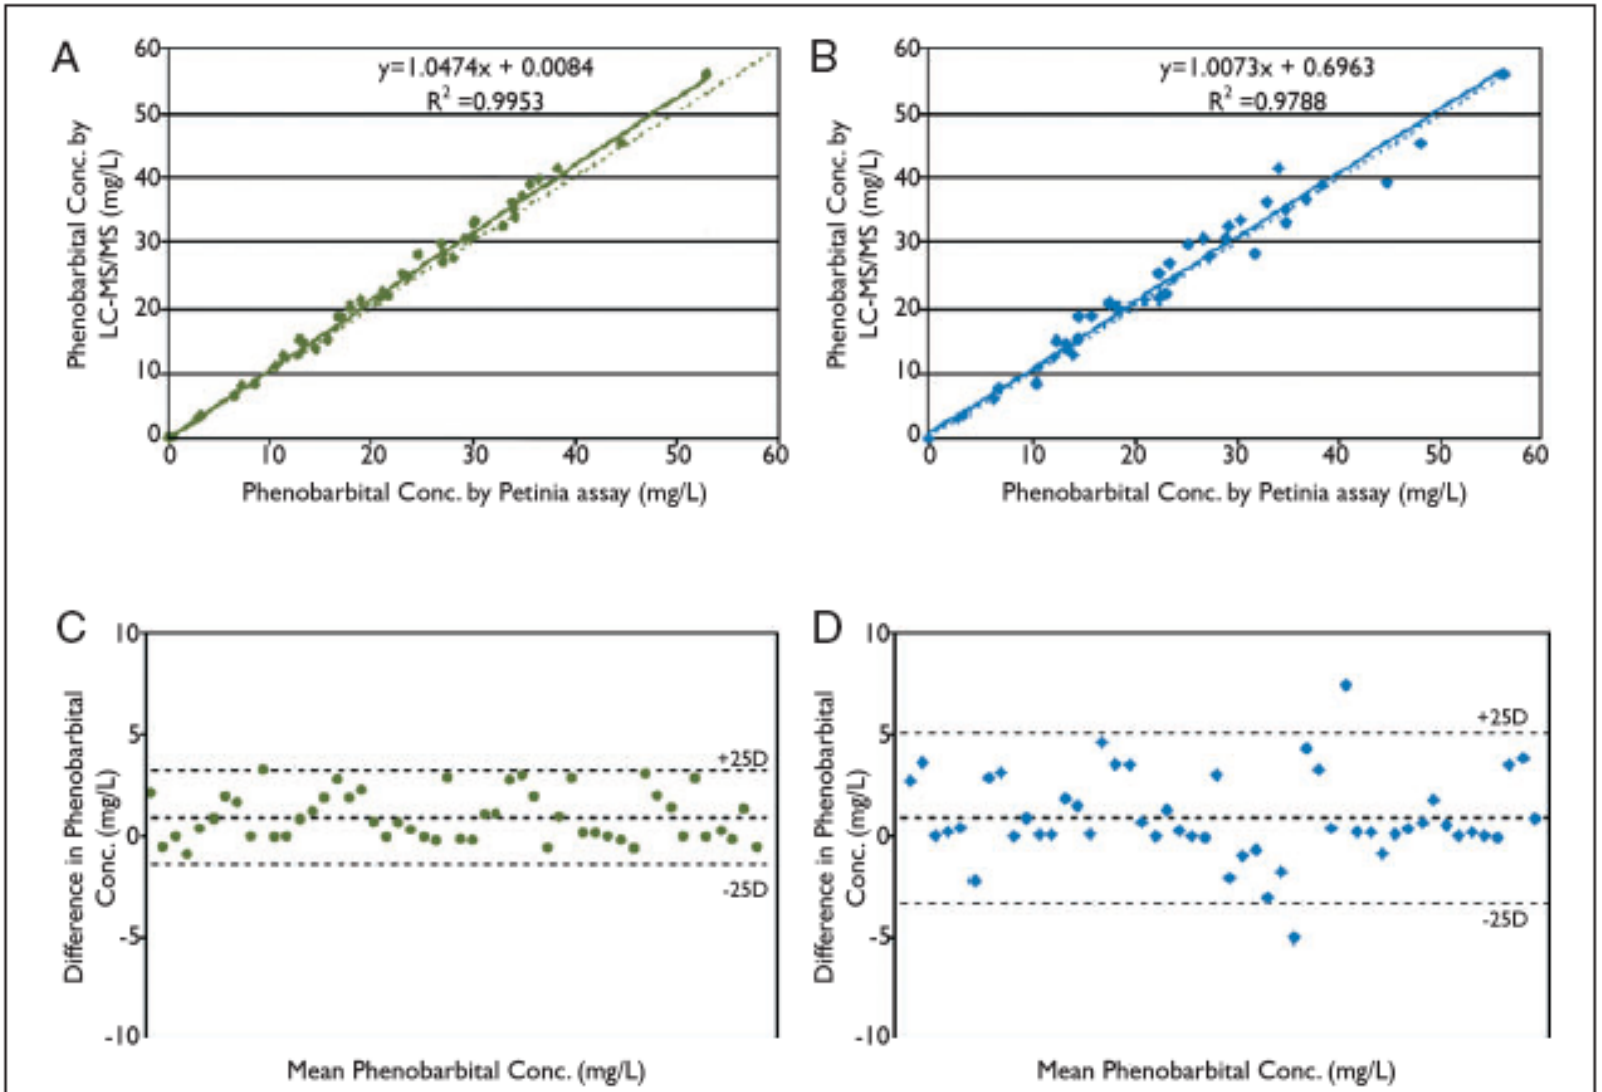

**Figure 1.**
LC-MS/MS versus Petinia: (**A**) and (**C**) adjusted for measured haematocrit. (**B**) and (**D**) adjusted for theoretical haematocrit (40% in adults; 55% in newborns). The dashed line is the line of identity, and the solid line is the regression line.

# CONCLUSION

**The analysis performed on DBS allows a great advantage in terms of costs, affordability, easiness of sampling, especially in young children.**

**Because of improved specificity, sensitivity and decreased sample volume requirements, this LC-MS/MS method should be particularly useful for monitoring TPM therapy in pediatric patients, for PK and research studies.**
